Random replacement: product 2 as the number of sellers increases
N = 1: monopoly; N ≥ 2: marginal OE | shaded band: ≤1% of own sales
Panel-specific N ranges; missing or rejected cases remain gaps

C = 1 | requested N = 1–100
Audited cases: 600/600

C = 1: product 1 is strictly optimal for every N
under the plotted marginal closure; see THEORY.md.

C = 3 | requested N = 1–50
Audited cases: 208/208

Illustrative $p_0 = 0.8805$
0% audited at N = 6–10

C = 5 | requested N = 1–10
Audited cases: 60/60

C = 8 | requested N = 1–10
Audited cases: 55/60

Product 2 (% of own sales)
Number of sellers N

$p_0 = 0.1$
$p_0 = 0.3$
$p_0 = 0.5$
$p_0 = 0.7$
$p_0 = 0.8$
$p_0 = 0.9$
$p_0 = 0.8805$ (C = 3, illustrative)
