
Simulation vs. saved predictions
OE distribution: distribution gap
Saved reputation values
Difference in cumulative probability
Reputation
Seller A
Seller B
p₀: simulated averages
Saved reputation values
Average over the included periods
Periods included after initial adjustment
Average selection draw for seller B
Average expected quality of seller B
Saved p₀
OE distribution: distribution gap
Continuous: closest saved rule
p₀: simulated averages
Continuous: closest saved rule
OE distribution: distribution gap
Continuous: blended saved rules
p₀: simulated averages
Continuous: blended saved rules
After initial adjustment; shading: 95% confidence intervals across simulations.
