Product 2 received by the customer: monopoly vs competition
Stationary calendar probability | n = 101 | verified grid solutions | panel-specific vertical scales
Competition sums both sellers; outside-option purchases do not count as product 2.
$p_0 = 0.1$
$p_0 = 0.3$
$p_0 = 0.5$
$p_0 = 0.7$
$p_0 = 0.8$
$p_0 = 0.9$
