Product 2 per seller and period: monopoly vs competition
Stationary calendar probability | n = 101 | verified grid solutions | panel-specific vertical scales
One seller in each market: probability of making a sale AND supplying product 2.
$p_0 = 0.1$
$p_0 = 0.3$
$p_0 = 0.5$
$p_0 = 0.7$
$p_0 = 0.8$
$p_0 = 0.9$
