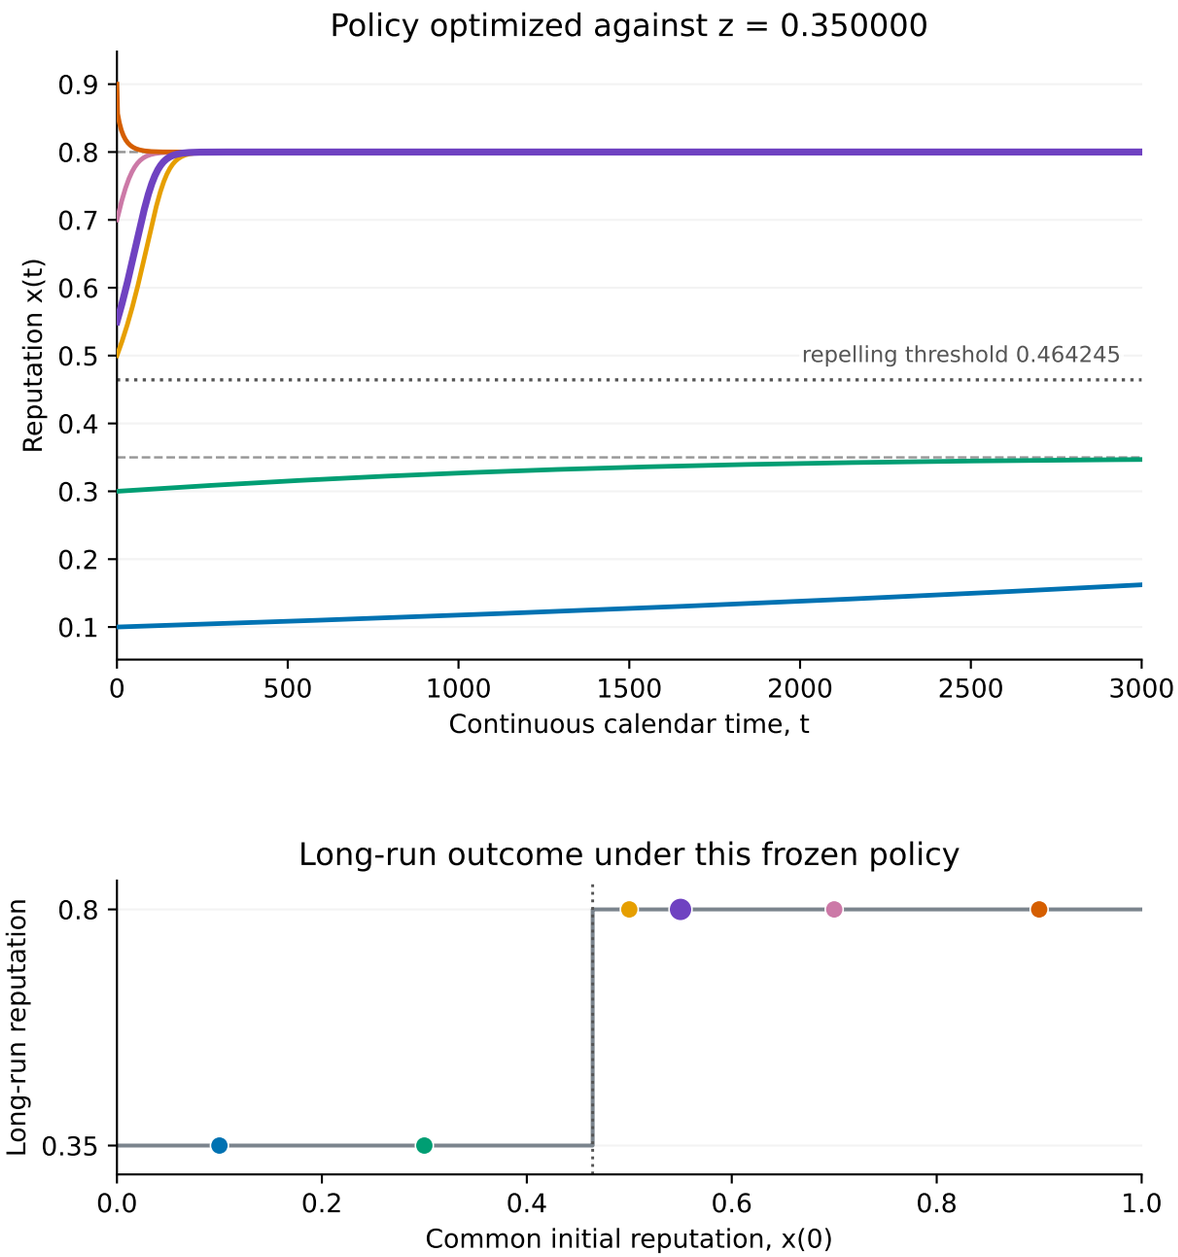
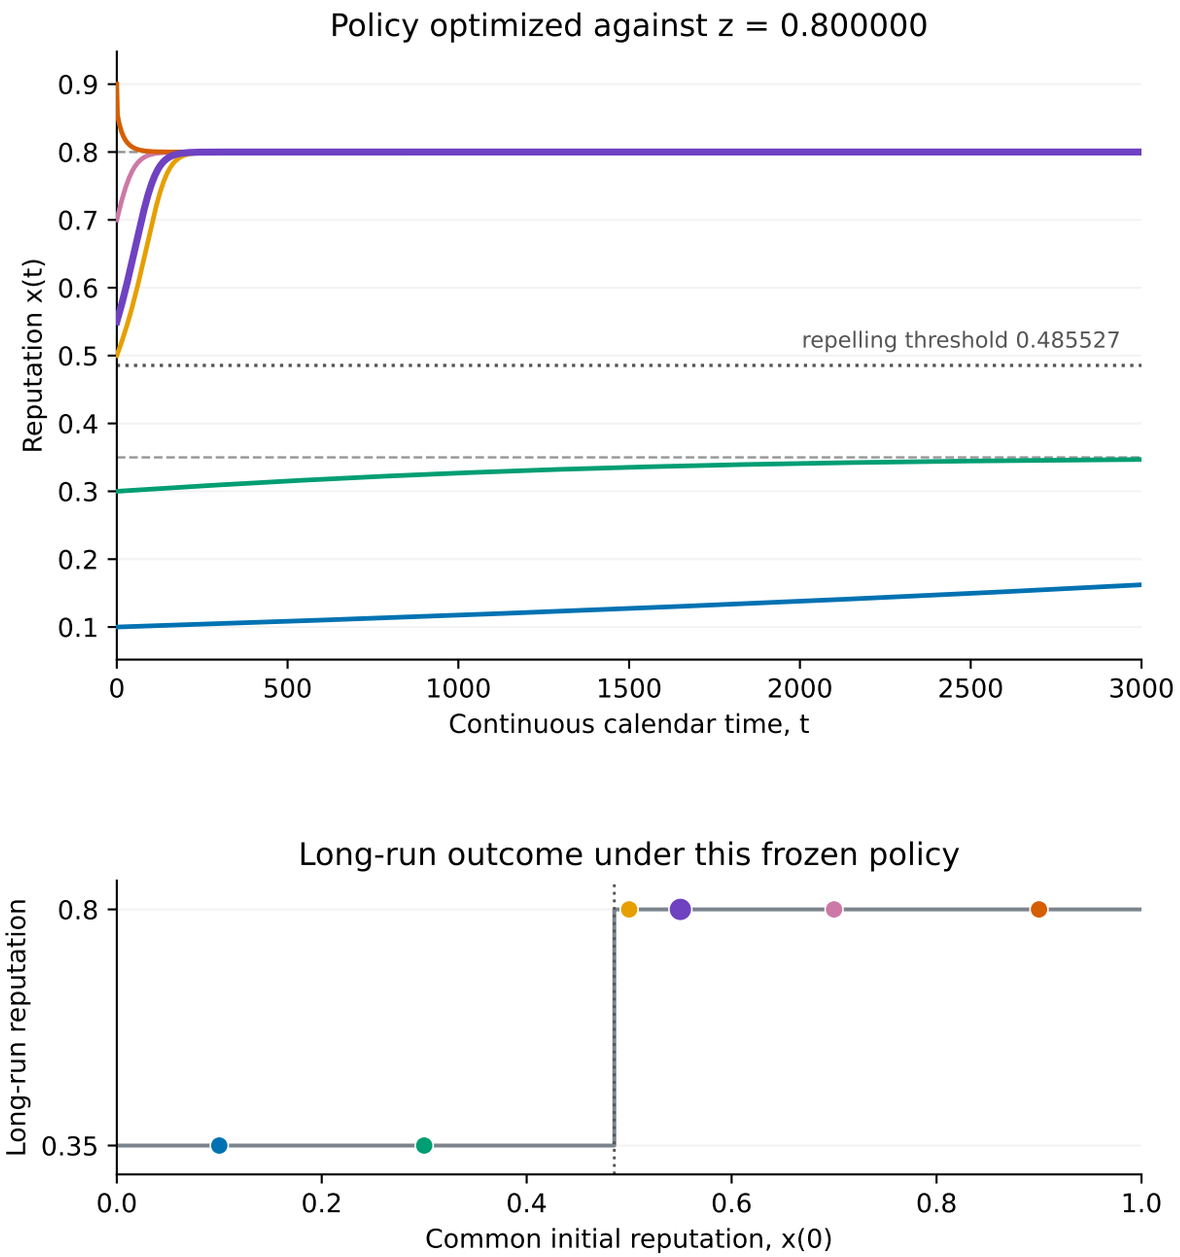
Fluid competition: initial conditions under saved optimal policies

$p_0 = 0.9$, $\rho = 0.7$ | Symmetric mature starts: x_A(0) = x_B(0).

Both sellers use the same frozen policy; demand uses both actual reputations.





x(0) = 0.1 | x(0) = 0.5 | x(0) = 0.7 | Repelling policy threshold

x(0) = 0.3 | x(0) = 0.55 | x(0) = 0.9 | Stationary state under the policy

Top: realized paths through T = 3000. Bottom: phase-line limits; slow paths may remain far from their limits. A path's limit need not equal the policy's rival conjecture.
