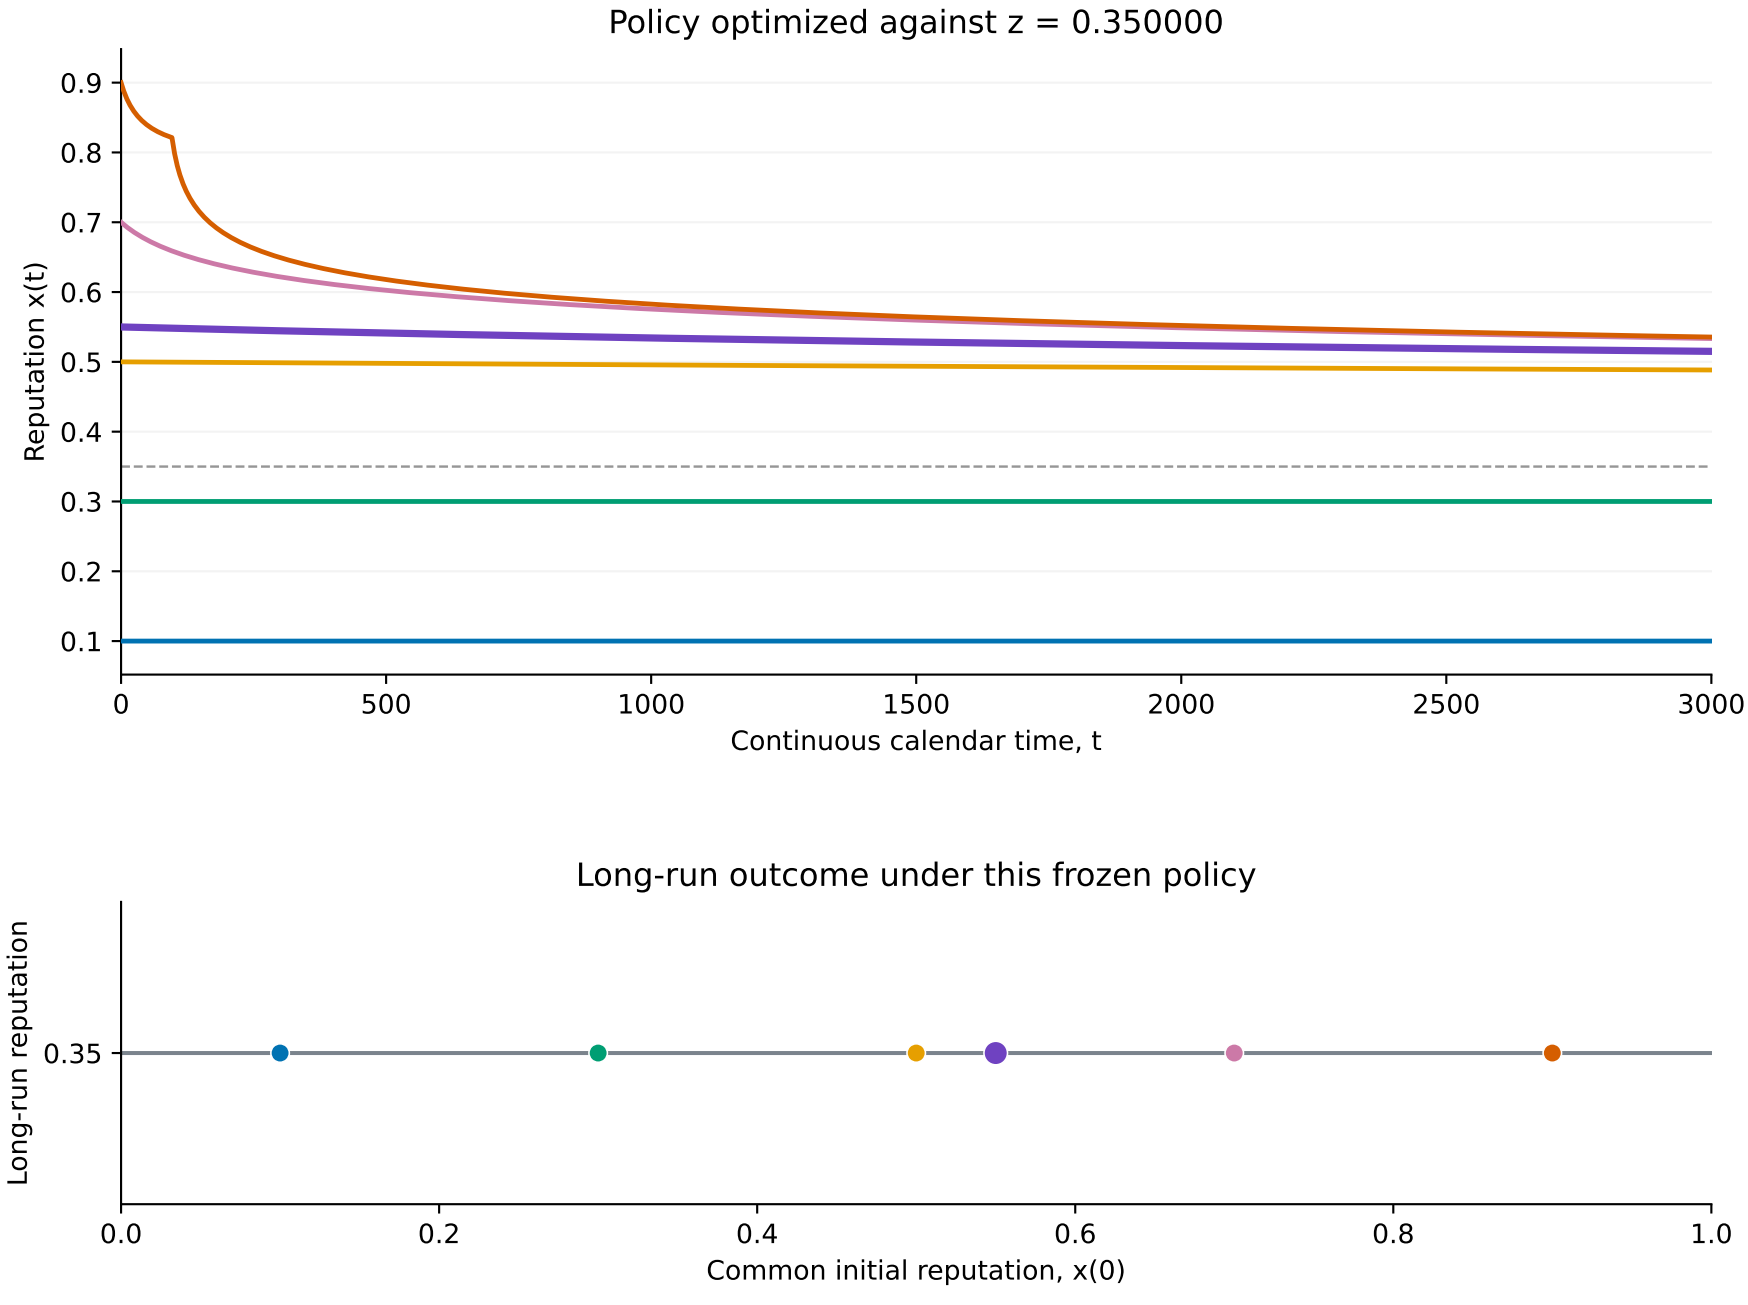
Fluid competition: initial conditions under saved optimal policy

$p_0 = 0.9$, $\rho = 0.9$ | Symmetric mature starts: x_A(0) = x_B(0).

Both sellers use the same frozen policy; demand uses both actual reputations.



Top: realized paths through T = 3000. Bottom: phase-line limits; slow paths may remain far from their limits.
A path's limit need not equal the policy's rival conjecture.
